DigitalPersona® **Privacy Manager Pro**

S E C U R E   C O M M U N I C A T I O N   M A D E   E A S Y

- Encrypt email messages
- Sign documents electronically
- Centrally control policies

DigitalPersona Privacy Manager Pro is a centrally-managed secure communication solution for businesses. It enables sensitive documents and communication to remain private, secure and unaltered wherever they are transmitted or stored.

With Privacy Manager Pro, you can **digitally sign and encrypt** Microsoft® Outlook email and Office documents with the touch of a finger or a password.

Your business now gets per-person accountability and fine-grained control over access to electronic documents and communication, without sacrificing productivity or ease of use. This makes it easier for organizations to comply with the growing demands of regulatory compliance and corporate loss prevention mandates.

Privacy Manager Pro can be layered on top of DigitalPersona Pro's fingerprint identity solution to provide a higher level of convenience and security than lengthy passwords. In addition, businesses have increased assurance that the signature truly represents the indicated person.

Data Loss Prevention for Compliance

- Sign documents and email to confirm that they are authentic and unaltered.
- Encrypt documents and email that can only be read by the intended recipient.

Document Approval Process Automation

- Create quick and secure approval workflows.
- Add electronic signature lines with irrefutable digital identities to documents.

Strong Security without Traditional Complexities

- Easily obtain, exchange and manage digital certificates for users.
- Use your current corporate infrastructure certificates.
- Easily obtain digital certificates from a global certificate authority.

Central IT Management and Control

- Easily publish and store certificates in Active Directory.
- Centrally control policies for users by IT.

KEY FEATURES

Digitally Sign Email and Documents
A digital signature confirms the identity of the sender and verifies that the content stays authentic and unaltered.

Encrypt Email and Documents
An option to encrypt sensitive information protects it so it can only be read by authorized recipients.

Corporate Digital Certificate Infrastructure Support
For organizations that have deployed their own certificates containing exportable private keys, Privacy Manager Pro allows IT to enable users to import their corporate certificates into Privacy Manager for use in their secure communication.

Active Directory Certificate Storage and Deployment – The ability to publish certificates in Active Directory creates a large number of Trusted Contacts within the company easily.

Central Group Policy Management
Using Group Policy Objects (GPOs), IT can control the policies governing users' secure communication, such as controlling encryption and defining acceptable types of digital certificates.

Comodo Digital Certificate Support
Employees can invite their external partners and business contacts outside the company to be their Trusted Contacts in Privacy Manager by using Comodo's Internet Security digital certificates.

Seamless integration with DigitalPersona Pro – Fingerprints add a higher level of convenience and security with the touch of a finger instead of a lengthy password, and with increased assurance that the signature truly represents the indicated person.

COMPONENTS

Privacy Manager AdminTool is installed on the administrator's system and enables central management of digital certificates and policies through Microsoft Active Directory.

Privacy Manager is installed on desktops and laptops and enables digital signing and encryption of email and documents.
